**PRESENT a 5 DAY  
CATTLE EVALUATION COURSE**

**WHEN** – 25<sup>th</sup>. – 29<sup>th</sup>. MARCH 2019

**WHERE** – BENDICK MURRELL via YOUNG, NSW.

**COST** - \$1200 – includes all course materials, morning and afternoon tea and lunch for the 5 days.

- \$2000 – per couple -

\$800 – Under 18's

**AIM** - To provide participants with the knowledge and practice in evaluating cattle using the Classic Livestock Evaluation System.

**OUTCOME** – To have trained evaluators and cattle breeders introduced to, and using the system, throughout the cattle industry in Australia.

**CLMS** will support trained evaluators to develop their business by working with them to offer field days in their areas to grow their business as a follow up to the course.

The course will be held on a property in Bendick Murrell, 25 kms. north of Young on the Cowra Rd. where there are good stock yards and a large new shed for the catering and the power point presentations. Three evening (approx. 90 mins.) sessions are planned at the Young Services Club.

Accommodation is available in several motels in Young plus the caravan park.

For further information, bookings and course program, please contact us on the above contact details.

**RSVP 1<sup>st</sup>. MARCH 2019**

# THE CLMS CATTLE EVALUATION FIELD DAYS/COURSES

HOW TO VALUE ADD TO YOUR **GRASS-ROOTS** CATTLE ENTERPRISE

THE COURSE WILL PROVIDE YOU WITH INDICATORS TO ASSIST IN YOUR SELECTION OF TENDER, FERTILE, CONSISTENT AND BALANCED CATTLE BY CONSIDERING THE FOLLOWING:

- \* How to build consistency into your herd.
- \* How to identify the keys to increasing fertility in your herd.
- \* The relationship between feminine and masculine traits.
- \* The importance of good hormonal activity in your animals and how to recognise the key indicators for it.
  - \* How hormonal activity affects an animal's overall performance and general health.
  - \* How to select cattle for tenderness of meat on the hoof.
  - \* The importance of cows that produce high quality milk.
- \* How to recognise the indicators of milk quantity and quality in both cows and bulls.
- \* How to "read" a bull's scrotum as the mirror to his daughter's udders.
- \* How to measure the main parts of an animal to identify their overall balance.
- \* How to identify the better feed converters in your herd.
- \* How to select for higher saleable meat yield.

## IS THERE VALUE IN THIS COURSE FOR YOU?

- \* If you increase your calving percentage by 2%+, would that cover the cost of this course for you?
- \* If you increased the number of offspring you sold in the first draft by 5% through greater consistency, would that be more profitable for you?
- \* If your herd were better feed converters and lower maintenance animals, would that be more profitable for you?
- \* When you are paid for saleable meat yield, which we hope will start to happen in the next 3 years, do you want higher yielding cattle?

**INFORMATION FROM THIS COURSE WILL PROVIDE THIS AND MUCH MORE.**
